SUMMARY

Full-stack software engineer with a strong MERN stack foundation and a growing specialization in AI application development. Experienced in building scalable web systems with React, Node.js, and REST APIs, alongside developing production-ready LLM-powered solutions using RAG pipelines, LangGraph, and vector databases. Proven ability to design end-to-end systems—from real-time applications and backend architectures to AI-driven knowledge systems that improve response accuracy and reduce manual effort. Passionate about integrating intelligent automation into modern web platforms to build impactful, user-centric products.

EDUCATION

B.E. in Computer Engineering - Honors in Data Science, Fr. Conceicao Rodrigues College of Engineering (GPA: 7.8/10) Nov '22 — Present
Bandra West, Mumbai, India

- Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Software Engineering

EXPERIENCE

Software Development Engineer Intern Jan '26 — Present
Intuitive Data Solutions Pvt. Ltd. Mumbai, India

- Stabilized and refactored a legacy Angular 9 supply chain application, resolving dependency conflicts, fixing authentication and routing issues, and achieving a production-ready build.
- Tested and debugged a React MERN + Node.js supply chain system, identifying business logic issues, validating API endpoints, and documenting system workflows and fixes

PROJECTS

Agentic Enterprise Knowledge Hub, | LangGraph, FastAPI, ChromaDB, Ollama, Next.js | [Link](#)

- Built a 100% local, production-level Agentic RAG system using LangGraph stateful workflows and Ollama (Llama 3.1 8B), implementing an LLM-based relevance grading step before generation to reduce hallucinations significantly.
- Engineered an async FastAPI backend with ChromaDB for persistent vector storage and HuggingFace all-MiniLM-L6-v2 embeddings, enabling accurate semantic retrieval over enterprise PDF documents.
- Delivered a real-time Next.js 14 dashboard with per-response agent relevance status indicators, enabling non-technical users to validate AI output quality and cutting document Q&A turnaround time by 70%

RespiScope - Smart Stethoscope & Telemedicine Platform, | MERN Stack, WebSockets, JWT | [Link](#)

- Architected a real-time teleconsultation platform with JWT-based auth and role separation (doctor/patient), delivering Socket.io-driven consultation chat.
- Engineered secure biomedical audio handling using MongoDB GridFS with authenticated streaming and waveform visualization, processing and storing 50+ patient audio recordings with zero data loss.
- Implemented an IoT-aligned auscultation pipeline for capturing, storing, and analyzing heart/lung sounds during remote consultations, reducing the need for in-person visits by an estimated 40%.
- Delivered a GitHub Actions CI pipeline with automated Jest tests covering 7+ backend endpoints, reducing regression bugs by 50%.

SKILLS

AI / ML Python, LLM APIs (OpenAI / Ollama), Prompt Engineering, LangChain, LangGraph, Hugging Face Transformers, RAG, ChromaDB, FAISS

Frontend ReactJS, Next.js, JavaScript, TailwindCSS, HTML, CSS

Backend Node.js, Express.js, FastAPI, REST APIs, WebSocket

Programming Languages Java, Python, JavaScript, C, SQL

Databases MySQL, MongoDB, PostgreSQL, ChromaDB (Vector DB)

Devops & Tools Git, Postman, VS Code, AWS, GitHub Actions, CI/CD, Docker, Vercel

CERTIFICATIONS & ACHIEVEMENTS

AWS Certifications Badges

Apr '25

Cloud Architecting, Cloud Fundamentals, Microservices, and CI/CD Pipeline Builder.

Research Publication: "Secure Carbon Footprint Tracking using Blockchain"

Aug '25

International Journal of Engineering Science (IJES)

Competitive Programming

Solved 250+ DSA, 50+ SQL problems on LeetCode and HackerRank.

Leadership

Jul '25

IEEE-CRCE Technical Council

Secretary at IEEE-CRCE (Jul 2025 - Present); organized Prkalp 2k25 (500+ participants, 1.2L sponsorship, 30+ colleges); promoted Junior Technical Head -> Vice Chairperson -> Secretary.
